## **DETAILED ACTION**

## Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species A, First Embodiment, Figures 4, 5, and 6, directed to an in-plane switching mode active matrix type liquid crystal display device where both common and pixel electrodes are designed to have a comb-teeth shape (not zigzag-shaped), the black matrix has a width smaller than that of the common electrode and the black matrix does not entirely overlap the data line and the common electrode entirely overlaps the data line.

Species B, Second Embodiment, Figures 36 and 37, directed to an in-plane switching mode liquid crystal display device wherein the pixel electrode is not formed on the second film of the second interlayer insulating film but rather the pixel electrode is formed on the first interlayer insulating film and the pixel electrode is comprised of the second metal layer. The pixel and common electrodes are formed of different layers.

Species C, Third Embodiment, Figures 38 and 39, directed to an in-plane switching mode liquid crystal display device whereby the common electrode is comprised of the first metal layer in an area other than an area in which the common electrode is composed of a transparent metal film formed on the second film.

Species D, Fourth Embodiment, Figures 40 and 41, directed to an in-plane switching mode liquid crystal device, wherein the common and pixel electrodes have a zigzag-shape and furthermore the device includes a floating electrode.

Application/Control Number: 10/081,800

Art Unit: 2871

Species E, Fifth Embodiment, Figure 63A, directed to an in-plane switching mode active matrix type liquid crystal display device, wherein the pixel and common electrode are formed on the second film of the second interlayer insulating film, the pixel electrode is formed of the second metal layer on the first interlayer insulating film, and a storage capacity is formed between pixel and common electrode lines.

Species F, Sixth Embodiment, Figure 63B, directed to an in-plane switching mode active matrix liquid crystal display device, wherein the second film may be formed only below the common electrode overlapping the data line.

Species G, Seventh Embodiment, directed to a liquid crystal display device, where the LCD device of the Seventh Embodiment does not include a color layer to be formed as part of the opposing substrate.

Species H, Eight Embodiment, directed to an in-plane switching mode active matrix type liquid crystal display device, wherein the color layer or black matrix layer or both color and black matrix layers is / are not formed as part of an opposing substrate but instead are formed as a part of an active device substrate.

Species I, First through Third Examples, directed to a method of fabricating a liquid crystal display device.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Application/Control Number: 10/081,800

Art Unit: 2871

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 2871

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeanne A. Di Grazio whose telephone number is (703)305-7009. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim, can be reached on (703) 305-3492. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)308-0956.
